

TECHTRIX 2026: Annual Tech Fest Report

RCC Institute of Information Technology, Kolkata

RCC Institute of Information Technology recently hosted its annual technical fest, “TECHTRIX”, a vibrant platform that brought together innovation, creativity, and technical excellence. The fest witnessed enthusiastic participation from students across departments, showcasing their skills in coding, robotics, gaming, entrepreneurship, and quirky tech-based fun events. The entire campus was transformed into a hub of brainstorming, healthy competition, and knowledge exchange under the TECHTRIX banner.

Event highlights and structure

TECHTRIX was organized under major thematic categories such as **AUTOMATA**, **GAMING**, **OUT OF THE BOX**, **FLAGSHIP EVENTS**, **ROBOTICS**, and various fun and competitive sub-events. Each track was designed to cater to different interests—ranging from hardcore programming and cybersecurity to creative presentations, debates, and pop-culture quizzes.

AUTOMATA and programming events

AUTOMATA served as the core technical segment, focusing on algorithmic thinking and problem-solving.

Sub-events like **Code and Seek** and **Codathon** challenged participants with timed coding rounds, language-agnostic puzzles, and real-time problem-sets.

These events encouraged logical reasoning, optimization, and clean code, giving budding programmers a practical taste of competitive programming similar to online coding contests.

Cybersecurity and gaming

The **CTF (Capture the Flag)** sub-event tested students' cybersecurity skills through challenges in cryptography, web exploitation, reverse engineering, and forensics. It provided a safe environment to explore ethical hacking and security concepts—a rare practical exposure in the regular curriculum.

Alongside, the **GAMING** segment featured competitive gaming tournaments in popular titles, fostering teamwork and strategic thinking while promoting a balanced view of gaming as a skill-based activity.

NEED FOR SPEED

Robotics and mechanical challenges

The Robotics zone was one of the most crowd-pulling parts of TECHTRIX. It included Robo Wars, where custom-built robots battled in an arena, emphasizing mechanical design, durability, and control. RC Car Racing added a fast-paced, adrenaline-fuelled experience, requiring precision driving and vehicle tuning. These events combined electronics, mechanics, and real-time adaptation, giving participants hands-on experience in robotics far beyond theory.

OUT OF THE BOX and creative events

The OUT OF THE BOX category encouraged unconventional thinking through design-thinking tasks, rapid prototyping ideas, and open-ended technical challenges. Students were pushed to think beyond the syllabus, addressing real-world problems with innovative solutions. This segment became a breeding ground for future project ideas and prototypes.

FLAGSHIP EVENTS and entrepreneurship

The **FLAGSHIP EVENTS** were the centerpiece of **TECHTRIX**, featuring high-stakes competitions with elaborate rounds and substantial recognition. A major highlight was the product pitching event, where students or teams showcased their own product ideas or prototypes to a panel of judges, focusing on problem-statement, feasibility, and innovation. Such events mimicked startup pitch sessions and helped students understand the basics of entrepreneurship, market needs, and presentation skills.

Debating and intellectual discourse

The debating segment added a touch of intellectual rigor to the fest. Themed around technology, ethics, and future trends, the debates encouraged students to think critically about the social impact of AI, data privacy, automation, and emerging technologies. This helped build public-speaking confidence and structured argumentation among participants.

Fun and fun-oriented events

To keep the atmosphere lively and engaging, **TECHTRIX** included several fun-oriented sub-events. The Tech Quiz tested general knowledge in computer science, gadgets, and emerging technologies through fast-paced rounds. The Fandom Quiz and Anime Fiesta brought in a pop-culture element, blending nostalgia with trivia and cosplay-style celebrations. These events attracted a wide cross-section of students, creating a more inclusive and energetic campus vibe.

Overall impact and conclusion

The TECHTRIX fest at RCC Institute of Information Technology successfully combined technical depth with creative expression and recreational fun. It provided a platform for students to apply classroom concepts in real-world challenges, work in teams, and present their ideas confidently. With events ranging from AUTOMATA and CTF to Robotics, debating, and Anime Fiesta, TECHTRIX not only enhanced technical skills but also fostered a vibrant, collaborative, and innovative campus culture.
