ABOUT THE CLUB

RCC Talkies is the dynamic journalism club of the RCCIIT, committed to cultivating the talents of aspiring writers, reporters. It provides a vibrant platform for students to explore various facets of journalism, from news reporting and feature writing to creative storytelling and digital content creation. The club organizes workshops, interactive sessions, hands-on projects, and live events that offer practical exposure to the nuances of journalistic practices, including research, interviewing, editing, and media ethics. Beyond honing technical skills, RCC Talkies encourages critical thinking, creativity, and effective communication, enabling members to articulate their ideas and opinions confidently. By fostering a culture of curiosity and informed expression, the club not only empowers students to engage meaningfully with current affairs and societal issues but also inspires them to tell compelling stories that leave a lasting impact.

WORDS FROM FACULTIES

It is indeed a matter of joy to be able to work so closely with the entire production team of the RCC Talkies magazine. This magazine holds a significant value not only as a platform that allows creativity, critical thinking and social awareness among students but also serves as an extension of the classroom learning by providing room for hands-on research, analysis, fact-checking, interviewing and ethical reporting in the context of real-world scenarios. This magazine also encourages a culture of inquiry and debate. It covers a wide range of topics apart from campus issues, updates about campus events, social issues, cultural activities, student perspectives and much more. It gives voice to the enthusiastic and talented young minds whose energy is channelized in constructive ways to foster teamwork, leadership and effective story-telling. Students take up different roles as editors, designers, photographers and proof-readers to ensure quality written output. This helps them build confidence, interpersonal skills while instilling accountability and discipline. The magazine also serves as an archive of life at RCC Institute of Information Technology which strengthens the identity of the institution as a place for holistic education and responsible citizenship.

-Dr. Tasnima Yasmin,
Assistant Professor of English,
Department of Computer Science (CS), RCCIIT

BIHAAN'25

From dancing and enjoying to the fullest in our own fresher's party to organizing the whole event by ourselves was an important milestone for our batch. And as second year students, "Bihaan" being the first real event we organized from the ground up, the experience was monumental. Having one of the best memories of our first year in Bihaan, we wanted to give our juniors a fresher worth remembering.

The very first thing I want to mention here is that a successful event is not about those few hours of celebration. It is about those late-night meetings, multiple sessions of planning, heated arguments, and debates on the theme, or on cultural details. We formed a committee, with multiple domains- food, cultural, decoration, logistics, crowd management, pr, learning how to negotiate with vendors and manage everything within a limited budget. There were inevitable moments of friction, like when there was a long list of participants willing to perform with only a few limited slots or when we realized our initial decor plan was overly ambitious, but these hurdles only strengthened our problem-solving skills and group bond.

From taking auditions to those last-minute preparations, watching the campus turn into a vibrant canvas of colors, music, laughter-- all mixed together was the ultimate reward. And as the freshers walked in through the door - Nervous, wide eyed, draped in those timeless traditional attires under, we saw ourselves in them. Giving them roses, seeing those first ice-breaking conversations turning into bonds of new friendship under the confetti we hung ourselves was a type of accomplishment never felt. With the graceful opening dance by the previous year Ms. Freshers, followed by the Mr. and Ms. Freshers competition, the interactive sessions, seniors' performances or the bands – it was a surreal experience. By the time the final band performance played out, we were not only tired organizers, but we also executed an event, the very first big event of our college life.

BIHAAN'25

Anticipation was in the air. For the past few weeks, we had been hearing rumblings of something exciting. Could it, perhaps, really be happening? The fantasy would come to fruition as we finally entered the college campus on 14th November. It was real and it was now - BIHAAN.

The campus had been adorningly decorated with colourful banners and streamers – each corner bearing evidence of the care and love our seniors had put in. All of this – the decorations, the celebrations, the entire day – was for us.

After the Nabin Boron and the initial greetings, we were enthralled by the wonderful Mr. and Miss Freshers performances where we could not help but be amazed at just how multi-talented our batchmates were. Following this, as we proceeded to devour delicious Biryani, perhaps deep down we all knew that the fun had just begun!

Even as the weather got colder and the daylight slowly faded away, the magic and the spirit was felt all around us. After lunch the energy seemed to have doubled and we began dancing.

As the performances by our seniors kept the night lit even as it got darker and we danced away, the weather around us might have been slightly chilly, but all we felt in our hearts was warmth. It was a feeling so surreal that it can't be put to words. With the crowning of Ankita Halder as our Miss Freshers and Niladri Saha as Mr. Freshers, the band performances began. As things eventually wound down, fireworks were set off – both literally and in our hearts – as our Fresher's Welcome came to its conclusion.

We went in as batchmates – some of us friends with each other, some not – but by the end of the night, we became one community – we are the batch of RCCIIT 2025-29.

INNOVISION'25

Innovision, the technical fest of the CSE Department of RCC Institute of Information Technology, was a vibrant blend of technology, creativity, and enthusiasm held from 29th August to 2nd September. The fest featured diverse technical, gaming, and non-technical events that encouraged holistic participation.

Technical events like Webify, C Tech, Quizify, and Capture the Flag on 29th August tested students' skills in coding, web development, and cybersecurity. Crack the Interview on 1st and 2nd September enhanced placement readiness, while Modelify (1st September), Appify (2nd September), and Codathon (Prelims on 1st and Finals on 2nd September) promoted innovation and problem-solving.

Gaming events such as Valorant, PUBG, and E-Football added excitement and competitive spirit. Non-technical events like Reel Lens, Shutterbugs, Extempore, and Wall competitions showcased creativity and expression. Innovision truly celebrated talent, teamwork, and the spirit of technological excellence.

IMeet 2025 - Technical Fest

IMeet, the technical fest of the Information Technology Department of RCC Institute of Information Technology, was a vibrant celebration of innovation, creativity, and technical excellence held on 11th and 12th September. The event brought together enthusiastic minds through a diverse range of competitions.

On 11th September, participants showcased their coding and problem-solving skills in Code Conquest, tested their cybersecurity knowledge in Hack the Flag, and sharpened their technical awareness in Nerd Nirvana, the tech quiz. Creativity met technology in Pitch.exe and Pixel Perfect, while Short Stack challenged students' logical and programming abilities. Gaming excitement was added with FIFA PC 24.

The second day, 12th September, featured Visio Craft, highlighting design and visualization skills, and BGMI, which brought thrilling competitive gameplay. Overall, iMeet successfully blended learning, competition, and fun, fostering teamwork, innovation, and technical growth among students.

AMPLIFY'25

Amplify 2025, the departmental fest of the Electronics and Communication Engineering Department of RCC Institute of Information Technology, was a vibrant celebration of technology, creativity, and innovation held from 3rd to 6th November 2025. The fest hosted nine dynamic events that engaged students across diverse domains.

Quiztronic, a technical quiz for teams of two to four, tested core ECE knowledge. Emotify, a solo digital poster contest, brought visual storytelling to life with impactful designs. Verbal Voltage energized minds through an on-the-spot debate battle. Fan-omania thrilled participants with a fast-paced fandom quiz. FluxForge challenged individuals to design analog and digital circuits with speed and precision. Pitchify encouraged teams to propose innovative business solutions to real-world problems in collaboration with HC. CipherXcape explored cryptography through competitive code breaking. EthicalOps tested ethical hacking skills online, while QuillQuest blended technical insight with creative blog writing. All participants received certificates, and winners earned medals.

AAROHAN'25

Aarohan, the cultural fest hosted by the Department of Computer Science, RCCIIT (the esteemed departments of BCA and BSC), was held on 4th September on the occasion of Teacher's Day. Despite being a one-day event with limited planning time, Aarohan came to life through extensive rehearsals and collective dedication. The fest featured diverse performances including dance, singing, recitation, drama, band, and both solo and group acts. An innovative touch was added by personally inviting faculty members through handwritten cards, who later joined the celebration with a heartfelt group performance. Though the journey involved several challenges, overcoming them made Aarohan a proud and memorable success for the department, inspiring many more events in the future.

DoSIER-2025: A Platform for Intelligence-Enabled Research

The Seventh Doctoral Symposium on Intelligent Enabled Research (DoSIER-2025), jointly organised by RCC Institute of Information Technology, Kolkata and Algebra Bernays University, Croatia, was one of the more serious academic events held on campus this year. Being an IEEE-associated conference, it followed a structured and professional format that was different from regular college programmes.

Researchers and faculty members presented work on intelligent systems, healthcare technologies and computational models. Many of the sessions were quite dense, and at times not easy to follow, but they showed how much depth actually goes into real research. The hybrid mode, with speakers joining from outside India, also gave the event a more international feel.

Students were mainly present as audience members, but even that exposure mattered. Listening to experienced researchers discuss their work made the atmosphere feel more academic than usual. Overall, DoSIER-2025 gave RCC a stronger research identity and a clearer connection to the global academic community.

— Swagata Ganguly

BEYOND QUBITS: THE MAJORANA REVOLUTION

In 2025, Microsoft introduced Majorana 1, a revolutionary quantum processor that could redefine the future of computing. Majorana 1 is built on a bold new concept known as the Topological Core architecture. This design uses topological qubits, offering exceptional stability and scalability to overcome major quantum computing challenges. At the heart of Majorana 1 are exotic quantum states called Majorana zero modes, formed within specially engineered materials known as topoconductors. These materials combine semiconductors and superconductors and operate at temperatures near absolute zero. This approach is remarkable because quantum information is protected by the system's physical structure, not primarily by software-based error correction. As a result, Majorana 1 could drastically reduce errors that have so far limited quantum computers to laboratory experiments.

Microsoft envisions this technology scaling to one million qubits on a single chip, a leap that could unlock practical quantum solutions to problems far beyond the reach of classical computers. Fields such as drug development, cryptography, climate modelling, and advanced materials research stand to benefit enormously from such computational power.

Despite the excitement, Majorana 1 has sparked debate within the scientific community. Researchers are cautiously optimistic, emphasizing the need for independent verification to confirm the presence and control of true topological qubits. This scepticism, however, reflects the importance of the breakthrough rather than diminishing its impact. Whether or not it fulfils its ambitious promise immediately, Majorana 1 represents a daring step toward fault-tolerant quantum computing, echoing the transformative moments that once introduced the transistor and the silicon chip to the world.

WTF COMPANY: THE FIVE STAR OF THE MIDDLE CLASS

In a very short time, WTF Company has become something of a disruptor in the budget-smart dining category in India. The brand aims to offer "The five star of the middle class." Thus, the brand marries affordability with aspirational dining experiences. The unusual acronym-based brand name in itself has turned into a powerful branding tool, building curiosity and ensuring top-of-the-mind recall. As of 2024, it operates four outlets in Kolkata and has reached a valuation of around ₹15 Crores, mentioned in Shark Tank India. Its revenue model is based on standardized pricing, where almost 75% of the menu items are sold at fixed rates, making gourmet-style dining affordable for middle-class families. Apart from restaurants, WTF is also expanding its product portfolio into the ready-to-cook sauces segment to tap the growing packaged food market. The success of the brand lies in its balancing of affordability with quality, using unusual marketing to set itself apart in the competitive industry. Challenges regarding scalability and consistency are tackled through lean operations and retention of customers. WTF's trajectory signifies how provocative branding, cost-efficient strategy, and product diversification can turn a small startup into a promising player in the food service market of India.

AI VS CREATIVITY

Standing at the end of 2025, we all have already experienced the dominance of AI slowly taking the spotlight, from just an existing myth to the first model on cracking the code of enigma machine, developed by Alan Turing during 2nd World War, to Checkers program developed by Arthur Samuel in 1952, to finally in the shape of ChatGPT or other AI chatbots, AI tools and robots, it was a slow but steady progress. But with many of its features, somehow artists, writers and many other people in creative domains are facing a huge backlash as today's AI is capable of generating professional images, writings and videos. The situation has come to the point that with some AI tools that are well-built with powerful and advanced features are now capable of generating images and videos that look just as real as the original ones.

In 2024, the recent Ghibli-style animated images generator of ChatGPT went viral. In 2016, Hayao Miyazaki, the co-founder of Studio Ghibli was once shown a grotesque zombie-like animation with unnatural movements. Miyazaki's response to this was visceral. He said, "whoever create this stuff has no idea what pain is.... I am utterly disgusted....I strongly feel that it is an insult to life itself". So while the Ghibli-like art may be technically impressive, it lacks the 'permission' or 'participation' of the people whose work it imitates. But looking at the current situation, as the AI is now capable of generating images that are actually very artistic, it is becoming more appealing to the customers. An art is made with the artist's heart and soul, his or her precious time, which makes it costly at times for the customers, thus, they are getting more inclined towards AI-generated arts that are available at much more less price. And that's how the skills and efforts of the artists are getting undervalued.

Same goes with the writers, they write from their past experiences, values, understandings of the human world and their beautiful imaginations. But the moment, they are published online, the AI gets its hands-on the work, it draws out the essence, the idea of the writing and for anybody seeking ideas or lines to write, it simply provides all possible data including the beautiful quotes and lines of a writer (Copyright infringement to be precise). And for writers also, the customers are inclining towards affordable data that AI provides over the original writings carrying unique voice, genuine emotions, lived experience of a writer. Recently, AI also have started taking over generating creative music of really good taste.

Thus in the end, in order to balance the overuse of AI to the extent of ruining originality and uniqueness, bringing awareness in people on the originality of the art, the creative process of artists, promoting storytelling is very crucial. There have to be a balance where AI doesn't need to be banned but rather need to be put on a balance, like in Mahabharata as Maharishi Vyasa was the narrator and Ganesha was the writer of the entire script, the AI will hold the pen but the voice of the creation will be from the human with raw and pure emotions, its unique ideas and lived experiences.

ARE WOMEN FREE?

Are women free in this changing land ?
Where the progress is shining upon every hand.
The world is moving forward fast and wide Yet the
silent rules are keeping her beside. She dreams
aloud, she takes courage to rise With hope reflected
in her beautiful eyes.
But every step that she dares to take
Is judged and questioned, making her shake. They
praises her strength but still fear her voice By
speaking for freedom of limited choice?
Yes, now the chains are lighter and some are gone
But many still exist and are holding on.
True freedom rises when the minds are real Where
the rights are followed not just declared.
So ask again with your heart awake – Are women
free or still must wait a little?

Anita Kumari Ram
Dept- CSE, 1st Year

মা (স্মৃতির ছায়ায়)

ছয়টা বছর কেটে গেছে
ক্যালেন্ডার বলছে সময় এগিয়েছে,
কিন্তু মনটা আজও
তোমার অপেক্ষাতেই থেমে আছে মা।

আজ তুমি নেই
তবু আজও প্রতিটা নিঃশ্বাসে
স্মৃতিচারণায় তুমি বর্তমান।
সেই পুরানো আলমারিটা
যেন আজও জমিয়ে রেখেছে তোমার স্বাপ্ন।

সেই নির্ভার নিরাপদ কাটানো দিনগুলো
যেন আজও বেঁচে থাকার রসদ যোগায়।
তখন মন খুলে হাসতে পারলেও
আজ হাসিটা বন্ধ হয় বন্ধ বেদনায়।

মা কোনো শূন্যপদ নয়
তাই আজও তা সংরক্ষিত শুধু তোমার জন্য,
মা হলো অতুলনীয় এক সম্পদ
যা আজ খোয়া গেছে,
কিন্তু দৃষ্টিকোণ থেকে হারিয়ে যায়নি।

যখন দেখি অন্য মায়েরা
তাদের সন্তানকে বুকে টেনে নেয়,
আমি চুপ করে চোখ নামাই -
কারণ ওই মুহুর্তে
ভীষণ করে মনে পড়ে,
তুমি থাকলে আমিও
এই ভালোবাসাটুকু পেতাম।

যাদের মা নেই -
একমাত্র তারাই বোঝে
মায়ের অনুপস্থিতি
কতটা শব্দহীন কান্নার।

মা, তুমি নেই বলেই
আজ আমি একটু বেশি শক্ত,
কিন্তু বিশ্বাস করো -
এই শক্ত হওয়ার পেছনে
সবচেয়ে বড় দুর্বলতার নাম
তুমি।

তুমি না থাকলেও মা,
আমার প্রতিটা ভালো থাকা,
প্রতিটা না বলা কষ্টে
তোমার ভালোবাসা নিয়ে আজও বাঁচা।।

মৌসুমী
(তোমার তিল্লি)

Dept of CS(BCA), 2nd Year

poetry

WE CAME AS FRESHER'S...WE LEFT AS FAMILY ✨

With hopeful steps and racing hearts,
Nobin Boron whispered, you belong here.
A journey began, a thousand starts,
a welcome so warm and clear.

A lamp was lit, words soft and bright,
poems, songs, and dance took flight,
crowns rose proud in rhythm and light,
cheers echoed into the night.

Walls dissolved in laughter sound,
Cos Theta's notes made spirits soar
The night wore joy, the ground unbound,
fireworks sealed forevermore.

We came as fresher's, hopes held tight,
we left as family – bathed in light.

WHERE QUESTIONS LEARN SILENCE

Amidst all those questions that cloud your mind,
You search for that answer for which your soul thrives
Time goes by as you keep wondering
Ultimately dissolving, your certainties thinning.
Life moves on and you flow along
But sometimes, as you pass by,
The lingering memory makes you stop by,
The questions hit you back in full blow
Making you stumble but not quite towards the answer,
you know!
But that's the time when you realise that maybe,
You don't want that answer anymore
Maybe you made peace with it
And life feels completely fine without caring for that unknown sign,
Then comes a time when the past looms before you
Quite strong, quite full, giving rise to those quiet shadows within you
Feelings emerge, on their way to drown you,
Making you feel deserted, although surrounded, but all alone
You want to question, you want to know
But there's two choices for you, you know!
Either you confront and go through it all
Or you leave without any baggage at all.

इक्कीस

इक्कीस,
लगता है अब उमर हो गई है।
समझ आने लगा है,
पापा की राखी कमीज़ इतनी भारी क्यों है।
समझ आने लगा है,
कि जीने की तमीज़ इतनी जरूरी क्यों है।
समझ आने लगा है,
कंधों पर लाधा गया ज़िम्मेदारियों का बोझ।
समझ आने लगा है,
कि बीस कि उमर तक जीना मजबूरी क्यों है।
बचपन की ये देहलीज़,
लगता है अब पार करनी ही होगी।
पापा की उतरी हुई कमीज़,
अब पहननी ही होगी।

SMART INDIA HACKATHON (SIH): A JOURNEY OF INNOVATION AND PERSEVERANCE

Their path was fraught with "hat-trick" obstacles, including bureaucratic hurdles and two flight cancellations. Though these delays unfortunately prevented two members from reaching the venue, the remaining team members persevered, proving that resilience is just as vital as technical skill.

Meanwhile, at IIT Roorkee, Team Innovate Ninjas represented us with their visionary project aimed at bolstering Atma Nirbhar Bharat. Led by Rajarshi Mondal, the team—Debdyuti Mondal, Rishi Paul, Rajarshi Das, Prachi Ghosh, and Shriza Baidya—focused on the jute industry of West Bengal. They developed a portable, low-cost device utilizing a dual-roller system to extract fiber with zero waste, a solution designed to empower local farmers and revolutionize sustainable production.

Beyond the hardware and coding, the students immersed themselves in the SIH culture, participating in Zumba, singing, and networking. Supported by mentors like Souvik Sir and our Principal, both teams returned not just with technical experience, but with the profound realization that engineering is about transforming setbacks into success.

Their journey at SIH stands as a powerful testament that true engineering excellence is not measured only by victories or venues, but by the courage to innovate, the resilience to endure, and the determination to turn every challenge into a stepping stone for national progress.

In the high-octane world of engineering, where passion meets technical grit, nothing defines the spirit of innovation quite like the Smart India Hackathon (SIH). This national competition, organized by the Ministry of Education and AICTE, challenges students to solve real-world problems. This year, our college achieved a remarkable milestone as two energetic teams fought through a sea of 150,000 competitors to reach the grand finale.

Team Hack Elites, led by Pritam Mandal (BCA, 3rd Year), journeyed to the Jaipur nodal center. The team, comprising Debanjana Ash (BCA, 3rd Year), Gayatri Roy (CSE, 2nd Year), Rajdeep Shome (CSE-AIML, 2nd Year), Tilak Sadhukhan (CSE, 2nd Year), and Debosmita Das (CSE-AIML, 2nd Year) - developed an intelligent career planning system. This project was designed to guide students toward their ideal professional paths through personalized recommendations, helping them navigate their futures with clarity.

Achievements

WE ARE PROUD TO ANNOUNCE THAT PRITAM HAS SECURED THE 2ND RUNNERS-UP POSITION IN THE 550KG POWERLIFTING COMPETITION ORGANIZED BY SSKM.

2ND RUNNERS UP IN THE TUG OF WAR EVENT OF SSKM. CONGRATULATIONS TO THE TEAM PARADOX.

CONGRATULATIONS TO TEAM NEO VISIONARIES FOR BECOMING THE WINNER IN CATEGORY AGENTIC AI IN TRIWIZARD TRIALS - A HOGWARTS INSPIRED AI CHALLENGE ORGANISED BY IEM IEDC ECE ON 13TH & 14TH SEPTEMBER 2025 IN OFFLINE .

HEARTIEST CONGRATS TO THE TEAM MEMBERS -ANIRBAN MAJUMDER AND ARCHISHA UPADHYAYA. LOTS OF HEARTFELT WISHES TO THEM FOR ENLIGHTENING THE FACE OF RCCIT IN THE FIELD OF TECH IN THE OUTSIDE WORLD.

Achievements

HUGE CONGRATULATIONS TO SUBHAYAN BASAK FOR MAKING RCCIIT PROUD! CHAMPION OF THE TABLE TENNIS TOURNAMENT HOSTED BY LORETO COLLEGE.

CONGRATULATIONS TO NEELKANTHA SAHA FROM 3RD YEAR CSE AIML FOR ACHIEVING 2ND POSITION IN CREATIVE WRITING (BENGALI) AT AALAP 2025, BETHUN COLLEGE REPRESENTING RCCIIT.

1ST POSITION FOR TEAM RUDRAHO OF RCCIIT IN DRAMA COMPETITION, 'CURTAIN CALL', IN KUSUMDEVI DENTAL COLLEGE.
